NEUROPSYCHOANALYSIS

Evolutionism, Affective Neuroscience

And Psychotherapy

25 January 2019

Rome, via dei Sabelli 108

AUDITORIUM

ABOUT THE CONFERENCE

“The conference main theme is Affective Neuroscience, which has allowed us to reposition the psychoanalytic drives within the motivational / emotional systems, in a context once again shared with biology. This repositioning of drives makes possible a clinic of the "implicit" based no longer on an *ineffable* unconscious but now it becomes visible and interpretable through the signs of the Expressions of emotions (Darwin 1872) present in both the human and animal species. It follows an integrated vision BrainMind of the subject and its problems, of the psychopharmacology and psychotherapy e therefore a transmission of theoretical-psychological knowledge based on a tangible and shareable clinic semiology”

SPEAKERS

Emanuele Bignamini

Massimo Biondi

Massimo Cozza

Massimo Di Giannantonio

Amedeo Falci

Teodosio Giacolini,

Vincenzo Guidetti

Luigi Janiri

Vincenzo Leuzzi

Anna Niccolò

Giuseppe Nicolò

Maurizio Pompili
